EDUCATION

New York University (NYU)

Masters in Computer Science

New York, NY

Sep 2023 – May 2025 (expected)

- Courant Institute of Mathematical Sciences, GPA: 4.0/4.0
- *Coursework*: Fundamental Algorithms, Operating Systems, Programming Language, Data Science, Artificial Intelligence

Singapore Management University (SMU)

Bachelor of Science in Information Systems Management

Singapore

Aug 2014 – Apr 2018

- Double Major in Information Systems and Analytics (Advanced Technology)
- *Coursework*: Software Engineering, Object Oriented Application Development, Computational Thinking, Data Mining

University of Mannheim

Exchange Semester, School of Business Informatics & Mathematics

Mannheim, Germany

Aug 2017 – Dec 2017

- *Coursework*: Large-Scale Data Management, Text Analytics, German Language

SKILLS

Languages: Java, Scala, Python, C, C++, Solidity, SQL

Web Technologies: Node.js, JavaScript, HTML, CSS

Libraries: Scikit-Learn, NumPy, Pandas, Matplotlib

Frameworks: SpringBoot, Flask, React, JUnit, Pytest, Behave

Cloud: OpenShift, Kubernetes, GCP, AWS

Databases: MySQL, PostgreSQL, Oracle

Methodologies: Agile/Scrum, DevOps, Design Thinking

Dev Tools: Git, GitHub, Docker, Jenkins, Postman, Jira, Zenhub

Others: Linux, REST API, OpenAPI, Swagger, Apache (Kafka,

Hadoop, Spark), Tableau, Quorum, Ethereum, Web3.js

EXPERIENCE

J.P. Morgan Chase

Software Engineer (Associate), Onyx by J.P. Morgan

Singapore

May 2020 – June 2023

- Developed decentralized application from the ground up (*Java, Web3.js, REST APIs, Docker, Kubernetes*) for JPM Coin System, a first-of-its-kind permissioned blockchain network that allows **near-instant** cross-border liquidity funding for institutional clients
- Led development and live deployment of blockchain ledger (*Smart Contracts, Solidity*) for Partior, an inter-bank blockchain network enabling multi-currency atomic settlements across major global banks in **under 2 minutes**
- Built proof-of-concept using Solidity Diamond Standard to make Partior's blockchain ledger scalable and upgradable, contributing to successful transaction of tokenized Singapore government securities on the Polygon network

J.P. Morgan Chase

Software Engineer (Analyst), Cybersecurity

Singapore

Aug 2018 – Apr 2020

- Developed Cybersecurity Data Lake (*Apache Hadoop, Apache Kafka, SQL, Linux, Docker*), enhancing the firm's real-time cybersecurity incident monitoring capabilities by **75%** and reducing incident response times by **30%**
- As Global Application Owner, led deployment and production management of JPMC Cybersecurity Log Collector, enabling real-time processing of syslog messages across 200+ global systems with **99.9%** uptime, enhancing security for critical operations

J.P. Morgan Chase

Software Engineer Intern, Cybersecurity

Singapore

May 2017 – July 2017

- Built an automation tool (*Java, SpringBoot*) to parse and analyze static security scanning results, boosting efficiency in the firm's application security assessments by over **90%** and reducing the evaluation times by **80%**

Li Ka Shing Library

Data Analyst Intern

Singapore

Nov 2016 – April 2017

- Conducted data mining and visual reporting on library usage patterns (*SQL, SAS, Tableau*), leading to a **15%** improvement in resource allocation efficiency and a **10%** increase in student engagement with library services

Fujitsu-SMU Urban Computing and Engineering Lab

Software Engineering Intern

Singapore

Apr 2016 – Jul 2016

- Researched data-driven optimization techniques for maritime-port-urban logistics, and developed an e-Market Platform application (*Java, SpringBoot, SQL*) that reduced operational costs by **20%** and increased logistical efficiency by **40%**

PROJECTS

House Value Prediction | Python, Scikit-learn, XGBoost, Pandas, Matplotlib, SHAP values

May 2024

- Developed a machine learning model using XGBoost and other techniques to predict residential property prices in Ames, Iowa, achieving an R^2 score of 0.918; provided actionable insights for real estate stakeholders to optimize investment strategies

Dice Game Simulation | Python, Q-Learning, Reinforcement Learning

May 2024

- Developed a dice game simulation utilizing Q-Learning to optimize dice-rolling strategies, dynamically adjusting decisions based on game state and past outcomes to maximize rewards; implemented features such as customizable game settings

Unix Shell Implementation | C, Unix, Shell Scripting, Operating Systems

Feb 2024

- Designed and developed a simplified Unix shell in C, incorporating functionalities like basic command execution, input/output redirection, pipe-based inter-process communication, and job control for process management
